CARE AND HANDLING INFORMATION DOWNLOAD GUIDELINES Changes in surgical techniques require increased use of intricate instruments/accessories that need routine inspection. Microsurgical instruments for ophthalmology have miniaturized 10-50% in working end size and delicacy. Staff time to process, care for and procure instruments is reduced with cost efficiency. It is important to remove unused instruments from your trays for efficiency. A routine inspection program will help you save time and money. We offer you economical Care and Handling Tips with a Refurbish/Repair/Replace Program to assist your staff. Go to our website to download copies of Crestpoint Care, Handling and Reprocessing Guidelines. Duckworth & Kent Care, Handling and Reprocessing Guidelines. Snyder Osher Forceps (for Snyder Osher IOL Cutter see page 70)

Geuder Stainless Steel, Reusable

G32997 (Incision Size 1.9mm)

These unique forceps have square-tipped ends with teeth that can firmly grip an IOL or IOL fragment. The three-dimensional gripping prevents the piece from torqueing or tilting with the forceps. Small profile instrument fits easily through a paracentesis and a 2.2mm incision. Rounded tips reduce the risk of engaging strands of iris tissue and reduce the risk of damage to the delicate intraocular environment.

**Snyder Osher IOL Cutter (for Snyder Osher Forceps see page 30)**

**Stainless Steel, Reusable**

**G32996 (Incision Size 1.9mm)**

Serrated tips prevent the “watermelon seed” phenomenon, especially vexing with smooth scissors edges and implants. Scissors can section an IOL either in pieces or for hinged folding, facilitating explantation through a small incision. The rounded tips reduce the chances of inadvertently catching iris tissue or capsule, while the fine serrations can help prevent the IOL from slipping out of the jaws during cutting. Strong enough for acrylic IOLs.
